

Operating Procedures for 10” through 24” GripTight MAX[®] High Pressure Test Plug

Thank you for choosing to use a GripTight MAX (GTMAX[®]) Test Plug. Please note that the following procedures apply to testing metallic pipes or tubes. If you are testing non-metallic pipes or tubes, please contact EST Group Customer Service prior to usage. Failure to follow the correct procedures for testing non-metallic pipes or tubes may result in injury to personnel and damage to equipment.

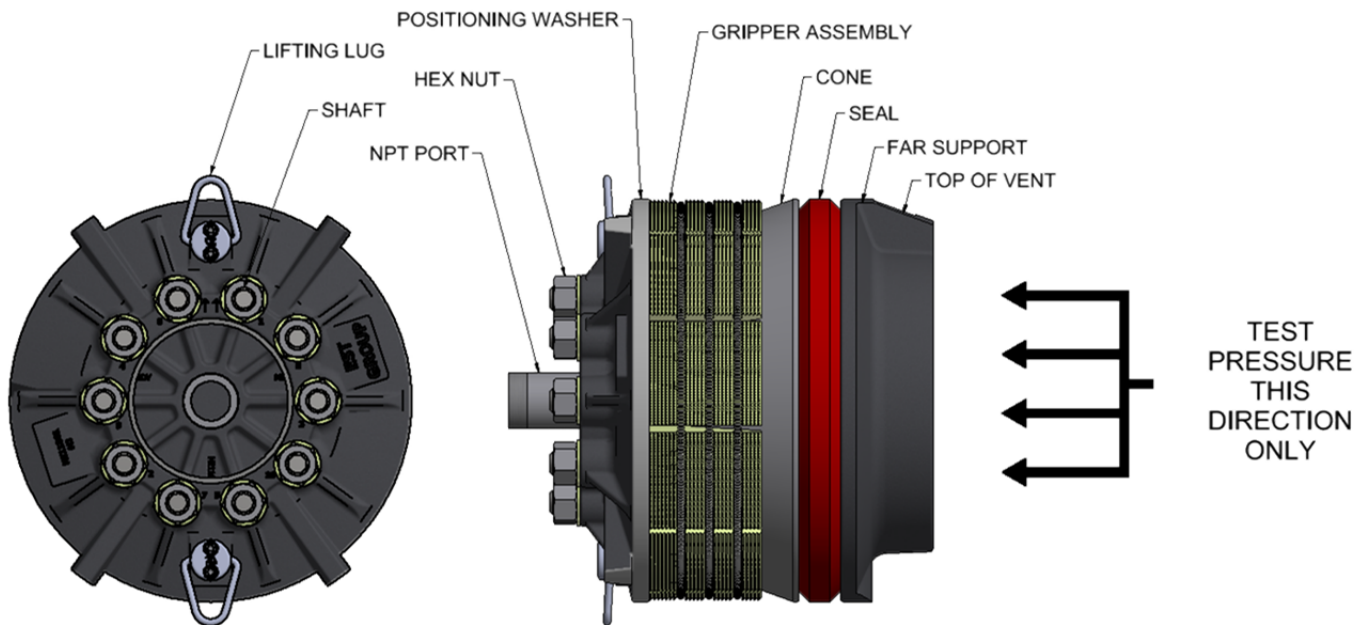

In order to carry out safe testing with your GripTight MAX Test Plug, the following equipment is required:

1. A calibrated torque wrench that is capable of producing the required torque
2. A deep socket or crowfoot wrench (1-5/8 inch for all plugs)
3. Pipe cap(s) or couplings with working pressure greater than or equal to the test pressure being used (see Table 1 for size).

All required test equipment is available through EST Group. All equipment and components required to maintain and refurbish GTMAX Test Plugs is available through EST Group. Contact EST Group Customer Service for information.

WARNING

- ⚠ Pressure testing is inherently dangerous. Strict adherence to these operating procedures and industry standard safety practices could prevent injury to personnel and damage to equipment.
- ⚠ All personnel must be clear of the GripTight MAX Test Plug during pressure testing. Never stand in the potential path of a GripTight MAX Test Plug during testing. Always understand and observe industry standard safe practices for distance between personnel and equipment being tested.
- ⚠ Pressures must never exceed the maximum pressure rating of any component in a system or the maximum pressure rating of the GripTight MAX Test Plug being used.
- ⚠ For safety, an incompressible liquid such as water should be used as the test medium. Residual air or gas must be displaced from the pipe prior to testing.
- ⚠ If testing pneumatically, every attempt to limit potential damage to equipment or injury to personnel must be made. The suggested test medium for pneumatic testing is nitrogen since it cannot support combustion. Testing procedures and protocol should adhere to the provisions for pneumatic testing set forth in the current ASME PCC-2 Repair of Pressure Equipment and Piping.
- ⚠ GripTight MAX Test Plugs are designed to withstand test pressure in the direction shown below. Do not use these plugs in applications that would subject the plugs to pressure in a manner that differs from the image below.

GripTight MAX High Pressure Test Plug

1. Test Preparation

- 1.1. Fully read and understand these operating procedures. Pressure testing is inherently dangerous and must be performed as safely as possible. If any instruction contained in this document is unclear, STOP and contact EST Group Customer Service.
- 1.2. Following these procedures and industry standard safe practices may prevent injury to personnel and damage to property.
- 1.3. Read these instructions prior to every test. Be familiar with and use applicable Human Performance Tools before, during, and after every test.
- 1.4. Hydrostatic testing is preferred over pneumatic testing due to safety concerns. Displace as much air or gas as possible prior to conducting a hydrostatic test.
- 1.5. If any instruction contained in these operating procedures contradicts a site specific guideline or procedure: STOP and contact EST Group Customer Service for guidance.

Test pressure MUST NOT exceed the maximum pressure rating of the lowest rated component under test.

The test pressure MUST NOT exceed the rated pressure of the plug.

Test pressure MUST NOT exceed 80% of specified minimum yield stress for host pipe, tube, or equipment.

Examples of Human Performance Tools

Pre-Job Briefing
 Two-Minute Drill
 Three-Way Communication
 Phonetic Alphabet
 S.T.A.R. (Stop-Think-Act-Review)
 Procedure Use and Adherence

 Flagging / Operational Barriers
 Self-Checking
 Independent Verification
 Concurrent Verification
 First Check
 STOP When Unsure
 Peer Checking
 Post-Job Review

WARNING

⚠ Contact EST Group Customer Service if the test pressure required exceeds the maximum plug rating or is in excess of 80% of specified minimum yield stress for host pipe, tube, or equipment.

2. Equipment Inspection and Preparation

Perform the following steps prior to performing your pressure test.

Step/Action	Additional Action/Information/Result
2.1. Visually inspect the plug for worn or damaged components. Replace as needed.	<ul style="list-style-type: none"> • The tapered surface between the Cone and Grippers must be free of friction producing dirt or corrosion. • Apply a light lubricant such as Molykote® DX or SAE 10W motor oil to the tapered surface of the Cone. Wipe away any excess lubricant from components making sure to leave an ample amount on tapered cone face and mating surface of gripper back. Lubricant <u>must not</u> be on seal.
2.2. Lubricate surface of the Tapered Cone.	
2.3. Inspect or lubricate the underside of the positioning washer where the grippers slide.	<ul style="list-style-type: none"> • The Seal must not have excessive deformations, cuts or scores.

3. Installing and Using the Safety Gag or Pipe Restraint

Safety Gags are strongly recommended for every application as they enhance the safety of the test system configuration. Perform the following steps if you are using a Safety Gag.

A Pipe Restraint is recommended for thin walled pipes or tubes (wall thickness equivalent to Schedule 10/10S) and required on pipes or tubes with walls thinner than Schedule 10/10S.

If a Safety Gag or Pipe Restraint is not being used, skip to Section 4: Performing the Pressure Test.

Step/Action	Additional Action/Information/Result	
	If	Then
3.1. Install Safety Gag Pipe Clamps or Pipe Restraints onto pipe being tested. If required, the safety chains may be placed between the Pipe Clamps or the Pipe Restraints. This configuration is acceptable as long as the placement of the chains does not prevent the Safety Gag or Pipe Restraint from tightening securely on to the outside of the pipe or tube.	Using a Safety Gag	Install the Safety Gag pipe clamps onto the pipe.
	Using a Pipe Restraint with or without Safety Chains	Position the Pipe Restraint over the area where the GripTight MAX Test Plug is installed.
<p>CAUTION</p> <p>⚠ GripTight MAX Test Plug Seals and Grippers are energized by test pressure. During pressurization, the Shaft(s) may move slightly. This is normal and expected. A small amount of slack in the Safety Chain(s) is required for this movement and energization to occur.</p>		
3.2. Tighten the bolts enough to prevent the Safety Gag or Pipe Restraint from moving. The Safety Gag or Pipe Clamp should not be able to rotate, slide, or move when pushed or pulled.		
3.3. Insert GripTight MAX Test Plug into the equipment to be tested.		
3.4. Follow remaining GripTight MAX Test Plug installation procedure as per the steps in Section 4: Performing the Pressure Test.		
3.5. Slip the Link(s) over the Shaft(s) before introducing test medium or test pressure. Do not place the Link(s) under the GripTight MAX Test Plug Hex Nut(s) or over the center port.		

Note: In some cases to make the clamp tight, the chain or chains need to be outside the tangs

4. Performing the Pressure Test

Perform the following steps to perform a pressure test with the GripTight MAX Test Plug.

Step/Action	Additional Action/Information/Result				
<p>4.1. Place the GripTight MAX Test Plug inside the pipe. The GripTight MAX Test Plug must be able to fit with the full length of the Grippers inside the pipe. Ideally, the plug should be inserted until the positioning washer contacts the face of the equipment being tested.</p>					
<p>4.2. If testing in seam-welded pipe, position the Grippers so that the weld seam is between two Gripper segments.</p>	<div style="border: 1px solid red; padding: 5px;"> <p style="text-align: center;">Warning</p> <p>⚠ It is sometimes necessary to remove the weld seam in the area where the GripTight MAX Test Plug is being installed. Carefully machine or grind the weld bead in the area of the test plug.</p> </div> <div style="border: 1px solid gray; padding: 5px; margin-top: 5px;"> <p>Note: The inside of the tube or pipe must be clean, dry, and free of rust, scale, or debris.</p> </div>				
<p>4.3. Center the GripTight MAX Test Plug within the pipe and hand tighten the Hex Nuts until the test plug has gripped the pipe ID.</p>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="background-color: #4a7ebb; color: white;">If</th> <th style="background-color: #4a7ebb; color: white;">Then</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">Using GripTight MAX Test Plugs horizontally,</td> <td style="text-align: center;">Tighten the bottom Hex Nuts first to help center the GripTight MAX Test Plug within the pipe.</td> </tr> </tbody> </table>	If	Then	Using GripTight MAX Test Plugs horizontally,	Tighten the bottom Hex Nuts first to help center the GripTight MAX Test Plug within the pipe.
If	Then				
Using GripTight MAX Test Plugs horizontally,	Tighten the bottom Hex Nuts first to help center the GripTight MAX Test Plug within the pipe.				
<div style="border: 1px solid gray; padding: 5px;"> <p>Note: Slight wiggling of the plug may allow for further hand tightening of the Hex Nut(s).</p> </div>					
<p>4.4. Use a star pattern to incrementally tighten the Hex Nuts. Numbers on the positioning washer provide a suggested tightening sequence. Repeat torque sequence until desired torque has been applied.</p>

P +65.3158.5052
est-asia@curtisswright.com

Step/Action	Additional Action/Information/Result
<p>4.5. Tighten the Hex Nut(s) with a calibrated torque wrench and an appropriately sized crowfoot wrench or deep socket. Deep Sockets are recommended for Multi-Shaft GripTight MAX Test Plugs. See Table 1 for nominal and maximum installation torques.</p>	<p style="text-align: center;">CAUTION</p> <ul style="list-style-type: none"> ⚠ The torque wrench being used must be calibrated to ensure that the correct amount of torque is being applied. An un-calibrated torque wrench may cause the operator to tighten the Hex Nut(s) either too much or too little. This may result in unsafe operating conditions or damage to the test plug. ⚠ Some crowfoot wrenches may not be able to apply the required amount of torque for some GripTight MAX Test Plugs. Before attempting to install, make sure the equipment being used is of adequate strength for the application. Using an insufficiently strong crowfoot wrench may cause injury to personnel or damage to the GripTight MAX Test Plug. ⚠ Failure to apply at least the nominal installation torque from Table 1 may result in unsafe operation of the plug. ⚠ If a crowfoot wrench is used, ensure wrench is used at a 90° angle relative to the handle of the torque wrench. Failure to do so can result in significant and dangerous over-torque.
<p>4.6. If a Safety Gag or Pipe Restraint is being used, slip the Link(s) over the Shaft(s) before proceeding. The Link(s) should not be placed under the Hex Nut(s) or over the center port.</p>	
<p>4.7. Install the pressure source leak tight. Use of a hose whip restraint is very strongly recommended. Inspect all connections to ensure they are leak tight.</p>	<ul style="list-style-type: none"> • For GripTight MAX Test Plugs not being used to pressurize or vent the system, install a pipe cap with a pressure rating that is greater than or equal to the maximum test pressure being used. <p style="text-align: center;">CAUTION</p> <ul style="list-style-type: none"> ⚠ Before proceeding, inspect the unit / component under test to ensure every component is in the correct configuration. This includes checking to make sure all GripTight MAX Test Plugs being used have been properly installed.
<p>4.8. Fill the pipe with test medium.</p>	 <p style="text-align: center;">Position A Position B</p> <ul style="list-style-type: none"> • Check for any leaks while filling. • If using a multiple GTMAX test plugs, fill the pipe or tube being tested through GTMAX Test Plug in position B (the Fill position) until test medium flows steadily out of GTMAX Test Plug in position A (the Vent position). • If not using fill and vent plugs, displace residual gases from the test system by opening the system at its highest point.

Step/Action	Additional Action/Information/Result
<p>4.9. Perform the pressure test.</p> <p>4.10. Check for leaks. A drop in pressure may not necessarily indicate a leak, as the GripTight MAX Test Plugs require some time to “settle” while pressure is applied and the testing is being performed.</p>	<ul style="list-style-type: none"> • Slowly introduce the test pressure. TEST PRESSURE MUST NEVER EXCEED THE MAXIMUM PRESSURE RATING OF ANY COMPONENT IN THE SYSTEM UNDER TEST. TEST PRESSURE MUST NEVER EXCEED THE MAXIMUM PRESSURE RATING OF THE GRIPTIGHT MAX TEST PLUG BEING USED. • Imperfections within the pipe being tested may cause small leaks. • Seam welded pipes occasionally require some weld bead to be removed. If the pipe is seam-welded and leaking persists after additional tightening, remove the weld bead in the area where the GripTight MAX Test Plug seal is installed. • If leaks persist, additional tightening of the Hex Nuts may be required. RELEASE ALL TEST PRESSURE before making adjustments to the GTMAX Test Plug. • Do not exceed the maximum torque for the GripTight MAX Test Plug. See Table 1 for torque values.
<p>4.11. Verify that GripTight MAX Test Plug movement is within specified limits.</p> <div data-bbox="105 766 673 997" style="border: 1px solid red; padding: 5px;"> <p style="text-align: center;">Warning</p> <p>⚠ Never re-torque the hex nut(s) while the plug is pressurized. This is unsafe and can cause damage to the GripTight MAX Test Plug.</p> <p>⚠ Release all pressure prior to adjusting GripTight MAX Test Plug torque.</p> </div>	<ul style="list-style-type: none"> • For Multi-Shaft GripTight MAX Test Plugs, movement up to 0.50” (13 mm) is acceptable. If plug movement exceeds the acceptable amount, immediately release all pressure and remove the GripTight MAX Test Plug. • Examine the GripTight MAX Test Plug components for wear. Pay particular attention to the condition of the Grippers. Replace parts as necessary. • Reinstall the GripTight MAX Test Plug, following all instructions provided. Increase the installation torque used. Do not exceed the maximum torque rating for the plug.
<p>4.12. Gradually release all pressure from the system once the test is completed.</p> <div data-bbox="105 1165 673 1417" style="border: 1px solid red; padding: 5px;"> <p style="text-align: center;">Warning</p> <p>⚠ Incrementally loosen Hex Nuts on multi-shaft plugs using the same star pattern as installation. Failure to do so may over stress the shafts and nuts and cause deformation or damage.</p> </div>	<div data-bbox="698 997 1536 1092" style="border: 1px solid gray; padding: 5px;"> <p>Note: If excessive Shaft movement persists after using the maximum GripTight MAX installation torque, stop the test, release all test pressure, and contact EST Group customer Service for technical assistance.</p> </div> <ul style="list-style-type: none"> • If using a GripTight MAX plugs in the Vent/Fill positions, to recover test medium, apply low pressure air to plug in Position A (see Section 4.8 reference). • Loosen the Hex Nut(s), remove the GripTight MAX Test Plug from the pipe and then inspect the GripTight MAX Test Plug for any deformation or damage. • If the plug is difficult to remove, wait for the seal to relax (up to 2-3 minutes) and a gentle wiggle of the shafts or tap on the positioning washer, will help.
<p style="text-align: center;">Warning</p> <p>⚠ Some test medium may remain inside the pipe after a hydrostatic test has been conducted. Caution must be taken when loosening Hex Nuts and removing GripTight MAX Test Plugs to prevent unsafe conditions from occurring during removal, e.g. water spills onto a catwalk creating slippery conditions.</p>

5. Storage

- Prior to storing, clean and dry the GripTight MAX Test Plug. Do not allow the Seal to come in contact with any cleaning chemicals or solvents. Exposure to these chemicals may damage the Seal.
- Ensure the gripper teeth are free of dirt and debris. Clean as needed.
- Re-lubricate the Shaft threads and between the Hex Nuts and mating surface as previously described in Section 2: Equipment Inspection and Preparation.
- Store the GripTight MAX Test Plug in an area out of direct exposure to sun or ultraviolet (UV) light. Do not store in an area where it will be subjected to heat in excess of 180°F (82°C). Excessive heat or UV light exposure will damage and prematurely degrade the Seal(s).
- For additional protection, the GTMAX should be stored in a in a plastic bag or wrap.
- Store these instructions with each GripTight MAX Test Plug.

Table 1: GripTight MAX Test Plug Information
